Exa® PACS/RIS

1.4.32_P1

Customer Release Notes

Table of Contents

New Features

Summary
• Users can now add and delete settings for encrypting study URLs, and can generate corresponding encryption keys.
• The Exa PACS/RIS viewer can now be opened by using an encrypted URL from an EMR or other external source.

Customer Requested Improvements

Summary
• When entering an adjustment payment and changing the payer, Exa PACS/RIS no longer erroneously changes the payer to the patient.
• Users can now set a span sensitivity of Default, which was the 0/Auto sensitivity used in version 1.4.29.
• Users can now search for patients by middle initial.
• In the HL7 Sender Log screen, the Retry All button was removed.

Other Improvements

Summary
• Various improvements to performance and the UI.
