Customer Requested Improvements

Summary

- Shortened the time required to process new orders created in the New Appointment screen when the database is large.
- When linking studies previously added to an order and then approving the main study, the linked studies now move to the correct status.
- When querying the Exa PACS/RIS database for patients by ID or ULI, the system no longer searches for all patients.

New Features

Summary

- No new features in this release.

Other Improvements
