

Study Share

Optional/additional CS-7 Software application

Study Share provides ease of use and improved department workflow with the ability to start a study at one Control Station and complete it at another Control Station.

Start and then continue patient studies in different exam rooms. Using this feature allows studies that are in progress or pending completion on one CS-7 Controller to be transferred to a different CS-7 Controller on the same network.

Enjoy increased redundancy and improved workflow by never having to rely on only one room to complete an imaging procedure regardless of what the moment brings.
